Buenos Aires, Argentina

PROFESSIONAL SUMMARY

Computer Science Engineering student (UBA). Developer with a strong foundation in Java and Python, specializing in the integration of software and hardware in mission-critical environments. Expert in incident resolution under pressure and system optimization, with a proactive focus on technical documentation and product scalability.

EDUCATION

•School of Engineering, UBA

Computer Science Engineering (42% of credits completed)

2021 – Present

CABA, Argentina

•EPET N° 4 O.E.A.

Personal and Professional IT Technician

2016 – 2020

Misiones, Argentina

WORK EXPERIENCE

•YCC Brothers

Backend & Systems Engineer

January 2026 – Present

Buenos Aires / On-site

- Architected and deployed a centralized **Python** server for delegated entitlement management, purchase history storage, and remote expiration logic for RK3228 devices.
- Led the functional scaling of the technical ecosystem, integrating stop announcement systems and DVR configurations across the fleet.
- Standardized operational workflows by creating technical manuals and *end-to-end* installation protocols for field technicians.
- Engineered the integration between **Next.js** interfaces, backend services, and **MikroTik**/**Starlink** infrastructure for automated bandwidth control and **Mercado Pago** payments.

•IICSA (Garrahan Hospital)*

Technical Support

Apr. 2024 – Present

CABA, Argentina

- Performed preventive and corrective maintenance of IT infrastructure and critical medical equipment.
- L1 Networking resolution: network diagnostics, UTP cable crimping, and RJ45 jack punching under high-pressure scenarios.
- Managed critical incidents in operating rooms during surgeries, adhering to strict time-sensitive requirements.
- Optimized deployment workflows by creating custom Windows images and automation scripts for Windows 11.
- Technical documentation and ticket lifecycle management through **Insight**.

•GCM Baires

Technical Support

May 2021 – Nov. 2023

CABA, Argentina

- Preventive maintenance of servers, networks, and IT equipment for SMEs.
- Implementation of IT solutions and management of technical budgets.

* Currently continuing to provide services at Garrahan Hospital through on-site weekend and holiday shifts by direct request of the institution.

KEY PROJECTS

•Consorcio 360 (SaaS)

Building management platform with automated expense settlement.

2025 – 2026

- Architecture: **Python (Django)** Backend and Angular Frontend.
- Automated mass billing and end-to-end management of complex administrative processes.

- Fundación Teko Pora**
Development and maintenance of an institutional portal for an NGO.
 - Developed using Angular, PHP, and MySQL. Server management and security hardening.
 - Rivera Designs**
Commercial web platform focused on conversion and traffic optimization.
 - Developed with Angular.js and optimized SEO, achieving a 35% increase in web traffic.

2021 – 2023

2021 – 2022

TECHNICAL SKILLS

Languages: Java, Python, PHP, C++, Next.js.
Frontend Technologies: Angular, React.
Databases: PostgreSQL, MongoDB, MySQL.
Tools: Git, Docker, MikroTik, Networking L1, Mercado Pago API, Automation Scripts (Shell/Bash).
Operating Systems: Linux (Arch, Debian, Ubuntu), Windows Server, OS Optimization.

SOFT SKILLS

- Resilience & Crisis Management:** Effective resolution of technical failures in critical environments (Operating Rooms) under extreme stress.
- Loyalty & Commitment:** Track record of outstanding performance, validated by direct requests for continued service after contract completion.
- Code Quality & Knowledge Transfer:** Focused on code traceability through automated commit reporting and detailed technical documentation.
- Product Vision & Autonomy:** Ability to diagnose technical debt, stabilize systems for production, and scale solutions for new business models.
